Table des matières

1 - Introduction

This document explains all needed information about deployment and usage of Restricted Text Web part on SharePoint online.
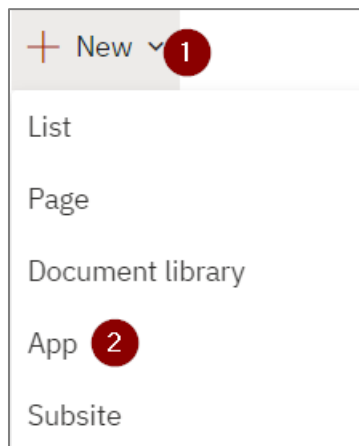

2 - Product description

The Restricted Text component is a web part that can be used on SharePoint modern UI of SharePoint Online and offers possibility to display text according to user's permissions. Component allow you to define multiple text zone, each of them with a specific permission needed. Text zone allow you to write text with formatting (font size, color, type, etc…).

2.1 - Component installation

To install the Restricted Text component, it is necessary to by the Store Microsoft AppSource (https://appsource.microsoft.com) by clicking on the "Get it" button. Your IT service might have to validate the component to install it.

Once validation is done, the component can be installed on any SharePoint site in the "Site content". Click on add a new Application.

Once install, the application appear inside your site content, alongside to your lists, document libraries, and other apps.

You can edit a page (or create a new one) and use the new web part.

Component can be used in all section type.

3 - Product usage

Once web part has been added into a page, you can add as many text zone as you need.

To add a new text zone, put your mouse before or after an existing text zone and click on the add button that appear.
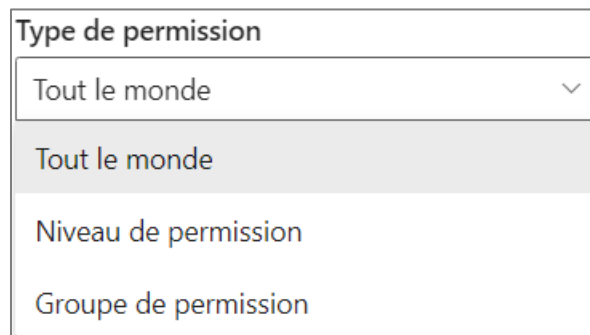

Each text zone is composed of two parts.

Permission configuration
